MATCHING A POWER SUPPLY – LENDING A HELPING HAND

When choosing a mains adapter, pay attention to wattage, voltage, amperage and plugs

To avoid downtime and maximise the life of your device, pay attention to four key parameters: power, voltage, amperage and plug. - **Power (W)**: The power supply should be at least as powerful as the original, and a higher value means less heating and greater efficiency.- **Current (A)**: It can be equal to or higher than required, giving more freedom of choice.- **Voltage (V)**: This is the only parameter that must be matched almost perfectly. The permissible deviation is only +/- 0.5V. - **Plug** : A key element ! It must be identical to the original to ensure a correct connection.

The basic data can be found on the label of the laptop (INPUT) or the nameplate of the power supply unit (OUTPUT) . An efficient choice guarantees operational reliability, dependability and time savings. Make an informed choice to enjoy the full power of your equipment !
