MATCHING A POWER SUPPLY – LENDING A HELPING HAND

When choosing a power supply, pay attention to power, voltage, current, and connectors
You can minimize downtime by following a few simple rules outlined in this paragraph.
Remember!
You can read the basic parameters from the **label** on the bottom of the laptop marked as **INPUT** or from the nameplate of the original power supply described as **OUTPUT**. These will be: **POWER** (W), **VOLTAGE** (V), **CURRENT** (A).
The following points will clear up any doubts that may arise when choosing equipment:
1. **POWER** (W) **–** this number indicates the **minimum value** that the new power supply should have. There is nothing wrong with using a product with **higher power**. This will make it less stressed and therefore less hot.
2. **CURRENT** (A) **–** as with POWER, the value on the new power supply can be **equal to or higher** than that given on the laptop's nameplate.
3. **VOLTAGE** (V) **–** the number for this parameter is more strictly required. Only a **fluctuation of +/- 0.5V** is allowed.

The last and equally important issue is the **PLUG**. Without it, you're going nowhere! There are no deviations here, it is **necessary that it is identical to the original**. The given size indicates the outer diameter and the inner diameter of the pin. If comparing based on the provided photo is not enough, an accurate **measurement** will be necessary to finally **confirm your choice**.

YOUR CHOICE MATTERS

The choice of charger affects laptop performance, user safety, and battery life
