

## CAR RECORDER HD | LCD 2.4"

Product code: 50225

The Qoltec driving recorder records movies in HD resolution. The camcorder has unlimited recording time - when the space on the memory card is over, the device will start overwriting the oldest files on the memory card.

The device has a motion detector that allows you to automatically start recording when motion is detected in front of the lens. Thanks to IR diodes, you can record also at night and in bad weather conditions. In addition, the camera has a built-in battery, so if you stop the engine or stop for a pause, it will continue to record.

### Technical data
